

Our premium quality high-speed and low-speed surface aerators allow tremendous versatility across a range of industries and wastewater treatment applications. Whether supplied as fixed mount or with floats, these surface aerators provide efficient wastewater aeration and intensive mixing capabilities which are environmentally and fish friendly.

They are primarily designed for installation where applications demand efficient aeration and effective general mixing applications. These aerators are available in motor sizes between 1.5 kW and 75 kW. The wide range of surface aerators assures oxygen is quickly blended with the water for unmatched and economic oxygen transfer. When the aerator is turned on, the result is an immediate, continuous barrage of dissolved oxygen (DO) that saturates the water.

All units can be supplied as part of a new system, or fully integrated into an existing system, regardless of make or model. They have the capacity to run 24 hours per day.

### Top 10 Benefits

- Superior Oxygen Transfer Efficiency (OTE)
- Efficient, robust and trouble-free operation
- Unrivalled mixing performance
- Clog-free, self cleaning design
- Wide range of mixing and aeration applications
- Can be used in intermittent aeration/mixing (anoxic) applications
- Versatile—supplied as part of a new system or fully integrated into an existing treatment plant
- Options available with fixed mount or float mounted
- Environmentally and fish friendly
- Available for purchase or hire
