CHEMICAL TREATMENT

THE PROBLEM

The removal of solids from liquid and the reduction of liquid waste discharges have long been a problem to industry.

THE SOLUTION

Hydroklear Services, in many cases through careful testing then treatability trials, are able to establish first the treatment method then to offer practical feasibility trials. The mechanical equipment and the ongoing chemical flocculants and coagulants are all part of HKS supply.

Mechanical equipment ranges from the simple screens, through multi media filters and centrifuge to complete systems. Whichever treatment method is required then HKS are fully resourced to offer the solution, and the equipment to deliver it.

THE RESULT

Reduced volumes of waste, improved discharge quality and in many cases reduced overall operating costs.
